Professional Experience

Economic Consultant | LabourX *August 2026 – Present*

- Built automated labour market intelligence reporting pipelines using Python, SAS, and Excel, that retrieve, validate, and analyze large datasets and generate finished reports with data-driven narrative text.
- Contributed to economic research projects on labour market topics and immigration in Canada, using microdata like the Labour Force Survey (LFS).
- Performed methodological reviews for client projects, identifying potential issues and recommending changes to improve effectiveness and efficiency.

Junior Economist (Co-op) | LabourX *May 2026 – August 2026*

Contributed to economic research and analysis projects at a small economic consultancy, with a focus on labour dynamics and sectoral analysis. Key responsibilities included:

- Collecting, cleaning, and processing large Canadian labour market and industry datasets using Python, R, Excel, and SAS to analyze trends and identify emerging labour market issues.
- Producing data visualizations and structured LMI reports to communicate findings on labour market trends and support evidence-based recommendations for clients.

Teaching Assistant | McMaster University *September 2025 – April 2026*

Led tutorials, held office hours, invigilated exams, and graded assignments for undergraduate economics courses, explaining technical concepts clearly to students with varied backgrounds. Courses taught:

- 1BB3 - Introductory Macroeconomics
- 1B03 - Introductory Microeconomics
- 2B03 - Analysis of Economic Data

Key Skills

Programming

- **Python:** Proficient in data analysis & visualization using Pandas, NumPy, SciPy, Matplotlib, and others.
- **R:** Proficient in data analysis & visualization using various packages (e.g. tidyverse and ggplot2).
- **MATLAB:** Comfortable using for economic modeling (incl. Dynare).
- **Excel:** Intermediate proficiency, some experience with advanced formulas.
- **SAS & SQL:** Working knowledge thanks to professional and academic experience.

Languages

- **Native:** English, Dutch, Portuguese
- **Intermediate:** Spanish, French
- **Conversational:** German

Reporting & Presenting

Professional and academic experience presenting research and findings to varied audiences, using software like LaTeX, Powerpoint, Word, and Quarto/Rmarkdown.

Quantitative Methods

- **Econometric methods:** Statistical inference, Time series analysis, Numerical optimization.
- **Macroeconomic computational methods:** Dynamic programming & value function iteration to solve DSGE, OLG, and AGE models.

Education

Master of Arts in Economics *August 2025 - August 2026*

Department of Economics, Faculty of Social Sciences, McMaster University
Hamilton, Canada, GPA: 3.6/4

Bachelor of Science in Economics *August 2022 - August 2025*

Tilburg School of Economics and Management (TiSEM), Tilburg University
Tilburg, The Netherlands

Research Experience

Contagious Prejudice: The Marrochinate *February 2025 – May 2025*

Riccardo Ghidoni, David Schindler. Working paper.

Collected, cleaned, and visualized historical geocoded data for a working paper using a Difference-in-Differences framework, supporting the empirical analysis and interpretation of results.

Projects

Can governments mitigate welfare loss through subsidization? The case of NAFTA termination.

Personal research project *April 2026 - Present*

Wrote an extension to the model of **Steinberg (2020)**, a dynamic general equilibrium model that analyzes the welfare losses from NAFTA termination, to investigate whether wage subsidization can reduce this welfare loss for consumers through labour dynamics.

Export intensity and employment volatility: evidence from the Canadian manufacturing sector

Bachelor's thesis *January 2025 – May 2025*

Analyzed whether export intensity was associated with employment volatility in Canadian manufacturing using industry-level (NAICS 3-digit) public data sources from Statistics Canada, and accounting for macroeconomic indicators through country-level data from the Bank of Canada, and the World Bank.
